B.Sc. (Hons) in Information Technology

Exercise

- 1. An IT company claims that their newly developed learning platform improves stu dent performance in online tests. According to previous data, 85% of students who used the platform passed their online tests. A batch of 50 students is selected at random who have completed the course using this platform. Let X denote the number of students who passed the test out of 50 students.
 - i. What is the distribution of X?
 - ii. What is the probability that at least 47 students passed the test?
- 2. A call center receives an average of 12 customer calls per hour.
 - i. What is the random variable (X) for the problem?
 - ii. What is the distribution of X? iii. What is the probability that exactly 15 calls are received in an hour?
